INTRODUCTION:

Why do Ritec, the manufacturers of the Clearshield systems, specify the use of an After Care regime in order to validate the performance warranty on the products?

Any product that is exposed to the broad spectrum of environments that the Clearshield system is exposed to, needs After Care. This has been proven in almost every environment, and consequently Ritec developed a range of products targeted specifically at the various "need" applications.

From Internal applications which mainly suffer human generated contamination (greasy finger marks on any glass, soaps, shampoos and make-up on shower screens) to External applications which suffer the weather range of extremes of temperature, excessive moisture to dry and dusty conditions, high winds, as well as dust, bird lime, sea salt, silicone leaching, carbon and oxide pollutions, it is plainly obvious that the After Care need exists.

The range of products are designed to enhance the performance promise of the Clearshield treatments, assuring the client a far longer product life. This is not a laboratory based promise. The evidence is from the field, where users continue to re-order after care product as they are extremely happy with the results.

PRODUCTS AND PROCESSES

• Clean-All (It's a concentrate, so dilute it up to 25:1 with clean water)

Gean-All is an all rounder....economical and versatile. It is terrific at general cleaning of most surfaces, although Ritec developed it specifically as the regular clean fluid for any Gearshield treated glass. It is also used to wipe down the Ritecoat surfaces..see Ritecoat under the PRODUCTS section of this web site. Gearshield "easy-to-Gean" glass will only need a weak solution of Gean-All, and contaminants do not readily stick to treated surfaces. Strengthen up the Gean-All mix for cleaning nicotine, cooking oils, grease, fingermarks, traffic film and general dirt. Gean-All is Environmentally friendly, water-based and biodegradable. Put it to the test...the efficacy test, and the price test.

Limescale Remover

Limescale Remover is effective for cleaning hard water scale from all types of glass, but is really very effective when used as an after care on Clearshield treated glass. Whether the glass is sandblasted or clear, internal or external, this product removes the scale exceptionally well, and leaves the Clearshield surface sparkling with a renewed energy. Very rewarding indeed. Use Limescale Remover as is from the bottle...do not ever dilute.

We have found this product to also work on ceramic, enamel, metal and plastic surfaces in and around the home.

Limescale Remover is <u>not recommended for use on marble or surfaces not resistant to acid</u>. Limescale Remover is very economical, is non-abrasive and is environmentally responsible.

• Aftercare for Shower Glass

After-Care for Shower Glass

all-in-one specialist cleaner, disinfectant and enhancer for the routine maintenance of ClearShield-protected shower glass.

- A very effective cleaner, disinfectant thanks to added biocides, and enhancer of ClearShieldprotected glass thanks to added Conditioner. Regular use increases ClearShield Shower Protect's warranty in a shower environment from 3 to 6 years.
- A non-abrasive cleaner to remove soaps, body fats and light limescale deposits.
- An effective disinfectant to improve hygiene in the bathroom
- A conditioner and enhancer for ClearShield Class, promoting an even longer lasting performance

For best results and to maximize the performance of your Clear Shield-protected Shower Class, we suggest you squeegee the glass dry after each use. When the glass needs a clean, (depends on frequency of usage) apply the After Care for Shower Class using the spray nozzle provided; gently spread the fluid over the entire glass surface and polish in with a soft doth.

This AfterCare offers optimum cleaning benefits, maximizing the efficacy of ClearShield. The antibacterial formula leaves a clean, fresh scent.

AfterCare for Shower Glass is also safe to use on all shower framework and hardware. In hard water areas, more regular use may be needed.

And finally, this specialist product is versatile, and can also be used on treated window glass, and on sandblasted glass.

• <u>General rules when maintaining your Clearshield treated glass</u>

DO NOT USE any abrasive scouring powders, sponges or pads.

Avoid using highly alkaline cleaners.

Do not use sharp instruments to clean your glass. These can permanently damage the glass, and in any event, Clearshield "easy-to-clean" glass would never require such drastic attention.
