

The Prevention and the Cure For Glass on Offshore Installations

With almost 30 years of field experience, the effectiveness of the ClearShield System has been proven time and time. Although the offshore/marine environment is the most harshest for glass, ClearShield still shines.

Some glass on the Deep Sea Bergen Oil Platform was treated with ClearShield 15 years ago to prevent glass corrosion (top row). Compare this with untreated driller cabin glass at the same installation (bottom row) – the difference is clear.

Driller cabin glass, before and after ClearShield treatment.

Note that all glass on offshore installations can be renovated and protected, including camera lenses and floodlight lenses.
